

APPRENTICESHIP CASE STUDY

Rob Galt

Carpentry and Site Joinery

Robert started his Carpentry & Joinery apprenticeship with Learning & Skills in June 2020. Prior to this he worked in a call centre part time but wanted to learn a trade and had always been interested in hands on work.

Robert has always demonstrated a strong work ethic and a passion to succeed and as he progressed through the course his confidence grew which led him to become the first apprentice to complete the new Carpentry & Joinery apprenticeship standards at Learning & Skills. Since starting he gained experience in roofing work, hanging doors, laying suspended timber flooring, installing stud walling and pipe boxing which proved vital to the development of his ability to work within the construction industry. By sharing his knowledge and experiences he has also been able to support his peers during several joinery related tasks.

Robert received excellent praise and reviews from his colleagues and management team and since completing his apprenticeship in November 2022 he has progressed onto the Advanced Carpentry & Joinery apprenticeship programme in December 2022. He enjoys the new challenges that the advanced apprenticeship brings and has made an excellent start to another successful year demonstrating that he is a vital member of the building team.

On completion Robert would like to continue his training further and progress to university to complete an HNC/HND in Construction and the Built Environment.
